

数字时代健康中国的发展

The Development of Healthy China in the Digital Era

黄 钢,Dr. Prof. Gang Huang 上海医学会健康管理分会主委 亚洲及大洋洲核医学与生物学联盟主席

President, Asia Oceania Federation of Nuclear Medicine & Biology

Health Awareness

Traditional medicine believes that health is the internal balance of the body.

Biomedicine: health as the absence of organic diseases and functional disorders.

Modern medicine: a good state of physical, psychological and social adaptation.

Health has gone beyond the medical field, more humanistic and social

The more advanced the sciences and biotechnology, the more rationality expands, the more need to return to humanity and faith

Happiness and health are the eternal pursuit of human beings.

I have edited and published a report on healthy living in Chinese cities every year, and for the past six years, six annual reports on healthy cities in China have been published, Which comprehensively analyse the healthy living status and improvement of urban residents in China.

"人民健康是民族昌盛和国家富强的重要标志" "为人民群众提供全方位全周期健康服务"。

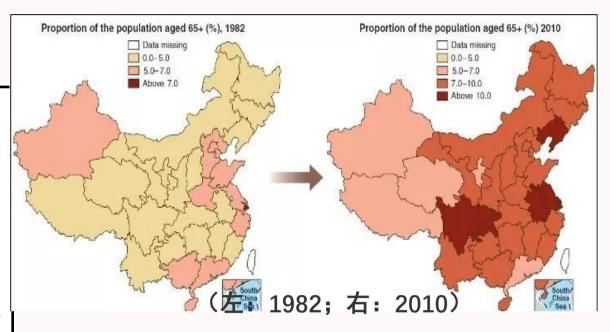

Chinese society has entered the aging society

Longevity means social progress in a country, .

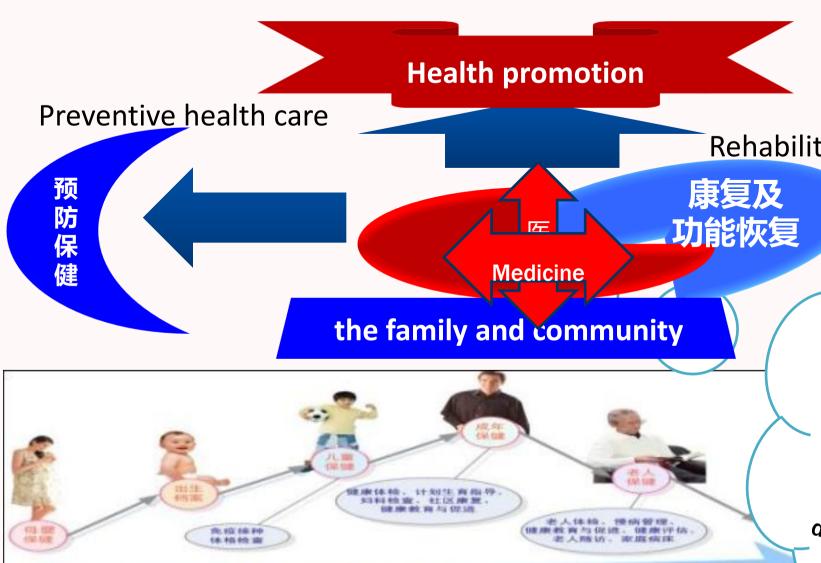

The life expectancy of the Chinese population increased from 76 years in

2015 to 79 years in 2030 .

By 2030, age-related chronic diseases such as cancer, heart disease, diabetes and Alzheimer's disease are expected to account for 85% of all diseases in China. Chronic diseases have replaced infectious diseases as the leading cause of death.

中国65岁人口在总人口的比重。 颜色越深,占比越大。Science2011, 333:581

Rehabilitation and functional recovery

understand the resources ^{available} to families and their communities, examine the impact of lifestyle and behavior on the incidence of chronic diseases, and understand the philosophical, spiritual, and ethical factors of disease and health care.

Health practice and new age integration

Build a strong health big data system, effectively understand national health trends, and apply artificial intelligence, cloud services, mobile Internet of Things and other technologies to build a refined, full-cycle health management service system.

与生态

智慧医疗重构医学模式

Vorld Journal of Meta-Analysis 等 20 余本专业杂志学术编 委。先后获国家科特讲书二等奖、华夏医学科特一等奖 教育部、卫牛部、上海市科技进步奖及中华医学科技奖 Health intelligence, digital is the only way Health service, health industry and health insurance form a positive interaction and cycle.

Establish an effective closed-loop model:

Digital medical services +

drugs +

health management +

health insurance

Smart health will reconstruct the people-oriented industry order and service structure

Smart medical and health service system will be reconstructed:

- > The relationship between doctor and patient and society
- >The relationship between doctors and nurses and medical skills
- The relationship between large hospitals and community hospitals and communities, families and individuals
- The relationship between

 medical institutions and

 drug management and insurance companies

应急

应急有效 平战结合

Great health involves human health, animal health and the surrounding environment, and their mutual relationship and harmonious development. Close cooperation between medical personnel, public health workers, biologists and environmental science experts is required.
